### 2024 Blue Cross and Blue Shield Service Benefit Plan - Standard and Basic Option Section 2. Changes for 2024 Page 16

---

Corrections to page number links below (links are unable to be colored red), 3/12/2024

- We now provide coverage for the following artificial insemination (AI) procedures once prior approval has been obtained: intracervical insemination (ICI), intrauterine insemination (IUI), and intravaginal insemination (IVI) for individuals meeting our definition of infertility. (See pages [22](#), [49](#), and [154](#).)
- We now provide coverage for breast augmentation for male to female gender affirming care. Previously, we did not list this as a covered service. (See page [64](#).)
- We now provide coverage for a mastectomy beginning at the age of 16 for female to male gender affirming care. Previously, we did not provide benefits until the age of 18. (See page [65](#).)
- We now require only 6 months of continuous hormone therapy appropriate to the member's gender identity, unless medically contraindicated. Previously, we required 12 months of continuous hormone therapy. (See page [65](#).)
- We have reduced the number of referral letters documenting the diagnosis of gender dysphoria and other criteria to one. Previously, we required two letters. (See page [65](#).)
- We now cover certain facial surgeries for gender affirming care and no longer limit covered medically necessary gender affirming surgical services to once per lifetime. Previously, we did not cover facial gender affirming surgery, and we limited covered procedures to once per lifetime. (See page [64](#).)
- We have added the following diagnoses and/or stages of diagnoses to the allogeneic blood or marrow stem cell transplants that do not require a clinical trial: Blastic plasmacytoid dendritic cell neoplasm; Adrenoleukodystrophy, Globoid cell leukodystrophy (Krabbe's leukodystrophy); IPEX (immune dysregulation, polyendocrinopathy, enteropathy, X-linked syndrome); Dyskeratosis congenita; Hypereosinophilic syndromes; plasma cell leukemia; severe congenital neutropenia, common variable immunodeficiency, chronic granulomatous disease/phagocytic cell disorders; and Systemic mastocytosis, aggressive. Previously, we did not cover these

diagnoses. (See page [68](#).)

- We have added the following diagnoses and/or stages of diagnoses to the autologous blood or marrow stem cell transplants that do not require a clinical trial: autoimmune – limited to: idiopathic (juvenile) rheumatoid arthritis, multiple sclerosis (treatment-refractory relapsing with high risk of future disability) and scleroderma/systemic sclerosis); chronic lymphocytic leukemia (e.g., T cell prolymphocytic leukemia, B cell prolymphocytic leukemia, hairy cell leukemia); relapsed neuroblastoma; osteosarcoma; plasma cell leukemia; and Wilms Tumor. Previously, we did not cover these diagnoses, or we required they be done as part of a clinical trial. (See page [69](#).)
- We no longer require a clinical trial for allogeneic or autologous bone or marrow stem cell transplants with the following diagnoses: Multiple Sclerosis and Wilms Tumor.
- We no longer cover allogeneic bone or marrow stem cell transplants with the following diagnoses: colon cancer; epidermolysis bullosa; glial tumors (e.g., anaplastic astrocytoma, choroid plexus tumors, ependymoma, glioblastoma multiforme); ovarian cancer; prostate cancer; or autologous bone or marrow transplants for retinoblastoma.
- For allogeneic blood or marrow stem cell transplants, we now cover additional diagnoses only when performed as part of a clinical trial: autoimmune disease (limited to scleroderma/systemic sclerosis, systemic lupus erythematosus, Idiopathic (juvenile) rheumatoid arthritis, CIDP (chronic inflammatory demyelinating polyneuropathy); Germ Cell Tumors; high-risk or relapsed neuroblastoma; lysosomal metabolic diseases: e.g., Mucopolysaccharidosis type II (Hunter syndrome), Mucopolysaccharidosis type IV (Morquio syndrome), Mucopolysaccharidosis type VI (Maroteaux-Lamy syndrome), Fabry disease, Gaucher disease. (See page [69](#).)
- For autologous blood or marrow stem cell transplants, we now cover additional diagnoses only when performed as part of a clinical trial: autoimmune disease (e.g., systemic lupus erythematosus, Crohn's disease, Polymyositis-dermatomyositis, rheumatoid arthritis, CIDP (chronic inflammatory demyelinating polyneuropathy); and sarcoma (e.g., rhabdomyosarcoma, soft tissue sarcoma). Previously, we did not cover transplants for these diagnoses. (See page [70](#).)
- We now provide coverage for marital and family counseling and psychotherapy services. Previously, we excluded care for these services. (See page [94](#).)
- We now provide benefits for drugs associated with covered artificial insemination (AI) procedures. Previously, we did not cover these drugs when associated with AI procedures. (See pages [103](#) and [111](#).)
- We now cover invitro fertilization related drugs limited to three cycles annually once prior approval has been obtained for individuals that meet our definition of infertility. (See pages

[103](#) and [111](#).)

- We no longer offer the Diabetes Management Incentive Program. Members who qualified for the program and completed the program in 2023 will still receive their earned rewards. For more information about the ending of this program, please visit us at [www.fepblue.org](http://www.fepblue.org).
